Frontend Engineer at FullThrottle Labs

FullThrottle Labs is looking for a **Frontend Engineer** who is passionate about React and building high quality user experiences. We believe in ownership and are looking for people driven to continuously ship new, impactful features and capabilities for our users.

Key Responsibilities:

- React/Redux: You think in components and are familiar with Redux and immutable structures.
- HTML/CSS: This is easy for you
- Javascript: You should be knowledgeable and up to date with the latest ECMA stages.
- UX/Product: You sweat the details to deliver a high-quality user experience.

Required Skills:

- React.js/ React Native
- HTML5/CSS3/JS
- Unit testing
- Excellent written and verbal communication.

Bonus Optional Skills:

- You're familiar with Angular.js or Vue.js
- You're familiar with Node or Python.
- You've worked with and built REST APIs.
- You're familiar with Sketch.
- Knowledgeable of advanced Chrome DevTools features, specifically around performance.
- Devops on AWS or Heroku etc
- Experience with continuous deployment

Pre-requisites:
- Graduation (must), Relevant work experience: 1 year+
- Excellent written and verbal communication skills
- Quick learner, adaptable to changing business needs
- Multitasking skills

About Us:

FullThrottle Labs has a wide and diverse portfolio of B2B SAAS business productivity applications which include marketing automation software primarily targeted towards Y Combinator startups, team management software 'DixiApp' which has around 250 companies using it globally, an identity resolution platform 'Truemailer', and finally a hiring automation platform 'PyjamaHR' that we've just launched in Q1 2020. Besides the above, we work with select Y Combinator startups and provide niche consulting in Automation & Machine Learning using our expertise in these areas.
Having seen traction and growing revenue with incredible potential in the market, FullThrottle Labs is eager to scale rapidly.
